

Country page time series data examples

Time series (country pages)

This file has a number of sheets of which two are relevant for our use.

All other sheets hold the data and the exchange rate.

Invent_Prod_Cons

Here you find the data on inventories, production and consumption. On the top left (cell B1) there is a dropdown for selection of the country you want to see. The three charts have two y-axis to combine data of different magnitude.

- Chart 1 shows the inventories in terms of total cattle, suckler cows and cattle on feed.
- Chart 2 shows the total production in head and the average carcass weight per head.
- Chart 3 shows the production and consumption in tons and the per capita consumption.

[Example DE, FR, US]

Prices

Here you find the data on beef prices and livestock prices in national currencies, the USD exchange rate and the USD prices. Selection of countries is also possible through cell B1. [Example DE, FI]
